WORK IN PROGRESS

Competitive effect of venture capital backing in Initial Public Offerings- France market

Using a sample of initial public offerings (IPO) in France, I analyze product market rivals' returns on IPOs, and whether the rival's reaction differs on the status of the issued firm.

The role of venture capital investors in the European acquisition of a private company.

I analyze the characteristics of acquisition of private firms by public companies and the impact that venture capital-backing has on the acquirer's return, acquirer's characteristics, and the form of payment.

Venture capital type and the exit decisions, with Colombo, Massimo and Guerini, Massimiliano,

Using the competing risk model we model exit times. The hazard rate for each exit route will allow analyzing

its likelihood (IPO, Trade sale, Liquidation). The objective is to examine the differential in the exit route depending on VCs' types.
