The Federal Reserve Bank of Philadelphia has been contributing to relevant fintech research and policy discussion. Our economists and data scientist team have explored emerging issues around fintech, such as the impact on credit access to the “invisible prime” or thin-file consumers, monetary policy effectiveness, financial stability, and funding availability to small businesses. In addition to conducting research on fintech and related issues, we put together a fintech conference annually. Our fintech conferences aim to engender a robust exchange and discussion from leading scholars, regulators, and market participants on fintech’s potential disruption and its impact on financial landscapes and financial stability.

Past conference speakers have come from various backgrounds, including academic research, legal, regulators, the fintech industry (the disruptors), and banking industry (the incumbent). In the past, we also had several founders and CEOs from fintech lending platforms and AI vendors, top executives from consulting firms, law firms, technology companies, rating agencies, and more. Top regulators, including a Federal Reserve Governor, the FDIC Chair, and the OCC Comptroller, have shared their thoughts at our fintech conferences. Last year, we had 267 people registered (by invitation only).

Our Third Annual Fintech Conference will be held at the Federal Reserve Bank of Philadelphia on November 14–15, 2019. As in previous years, we are partnering with outside experts from well-known organizations. Our partners this year include the Wharton School of the University of Pennsylvania, the Bank Policy Institute, the Brookings Institution, and the University of Cambridge.

For more details about our previous fintech conferences, with the agenda, speakers’ bios, presentation slides, research papers, photos, videos, and our published article that summarizes key messages from the conferences, see the links below:
